Academic Background

Undergraduate Degree in Information Technology / UFPR (2010).

Graduate Degree in Software Engineering / UFPR (incomplete).

Main Qualifications

Experienced software engineer with a demonstrated history of working in the software industry. Highly skilled in PHP, Ruby on Rails, Java, node.js, react.js (with flux, and redux). Good knowledge of infrastructure and cloud platforms, mainly Amazon Web Services, currently responsible for some of the company's softwares hosting structure alongside our sysadmin team.

Also experienced in mobile apps development both in native language (more experienced with Android than iOS), and in react native.

PROFESSIONAL BACKGROUND

Inovare — Brazilian company focused on Web systems development using innovative technologies.

jul/2010 to sep/2012

Acting as a software analyst/developer for web and mobile platforms through various technologies.

I had the opportunity to work with systems analysis, using mostly the UML as a standard methodology, always developing new skills and characteristics necessary to understand and design systems that suits the customer needs.

I also worked with software development using several different technologies and platforms, such as:

- Android, iOS and Windows Phone apps development with it's own native language and technology as well as with the PhoneGAP hybrid platform;
- Web systems development using the Ruby on Rails framework, as well as the integration amongst web platforms and mobile apps through Web Services and APIs;
- Web systems development using a proprietary PHP framework which I actively participated in the design and development from the concept to it's

implementation;

- Also got the chance to work with the C# language and the Asp.NET platform, both MVC and WebForms;
- Through most projects, also worked with front-end development using from basic HTML, CSS and JS, to complex AngularJS pages.

oct/2012 to mar/2015

Over the last years of my employment at Inovare, I worked as a team leader.

During that time, I gained more responsibilities in the company.

Although I kept working directly with software analysis and development, I also became mainly responsible for managing the team and deciding the architecture and methodology to be used when coding the software.

Besides being responsible for the main decisions regarding the software architecture from concept to execution, I also was responsible for helping the team develop their own skills and overcome any technical difficulties.

GRPCOM — One of the biggest communications group of the country with companies in several areas, including TV, newspapers, and radios.

dec/2015 to present days

Working as a software engineer, responsible for several developments inside the company.

Participating in the development of web projects as well as mobile apps with several new technologies, such as node.js, react.js, react native, and others.

Also work in coordination with our sysadmin team for a continuous deployment and monitoring of our systems with both internal and cloud infrastructure (specifically AWS).

Mainly responsible for preparing a CI/CD and containerized environment for our projects in order to boost productivity.
